

THE PROJECT

The Asian University for Women is building a new campus in Chittagong, Bangladesh that will serve 2,500 students from across South Asia, Southeast Asia, and Southwest Asia. DOBER LIDSKY MATHEY (DLM) was retained to program all the space that will be needed for this campus.

CHALLENGE

- To identify all the required spaces and describe each one in terms of purpose, size, organization, and space assumptions in a summary program
- To describe the spaces in detail addressing such specific issues as architectural characteristics, mechanical requirements, access and adjacency relationships, and special furnishings and equipment
- To help clarify the organization of the campus as well as several subsets, reflecting essential facility and programmatic relationships

SOLUTION

DLM developed a facility program, comprised of 1,364 spaces and almost 1.4 million net assignable square feet of academic, campus life, residential, and support space. The project will be constructed in three phases with a completion date estimated to be 2019. In the interim, the University will operate in leased space.

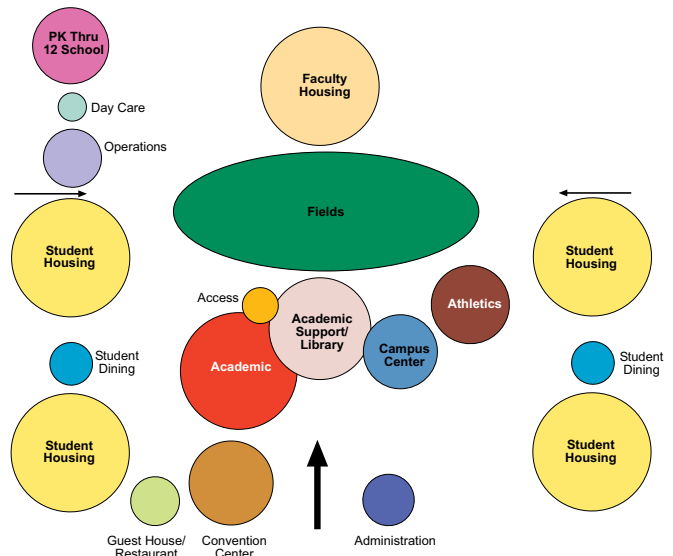

RESULTS

The University is currently located in temporary space in Chittagong, as the design and construction of the new campus proceeds.
